BRING THE *rough version.*

A human-guided studio for ideas that need evidence, decisions, and a useful next move.

FOUNDING PILOT

Portable studio + partner programs + public learning

Management case / not an investment offer

01 / THE COMPANY DECISION

Launch a studio. Not a monument.

Lame Brain Ideas should launch as a portable, partner-hosted and digital idea studio. The company earns the right to add fixed cost by proving paid demand, useful outcomes, contribution, and trust controls.

$125K	$226K	Month 19
90-day authorization ceiling Released in evidence-based tranches.	**24-month funding need** Management case with $25K buffer.	**first positive monthly EBITDA** A testable forecast, not a promise.

GO NOW	GATE FOR LATER
Four paid founding offers; partner-hosted clinics; an eight-episode public-learning season; privacy, evidence, and accessibility controls; a 24-month monthly model.	Permanent flagship; owned crowdfunding marketplace; investor network; securities activity; equity compensation; franchising; national paid-media scale.

Why: the category is memorable and the need is plausible, but there is still no primary proof of paid demand, acquisition cost, delivery time, brand acceptance, or repeatable customer outcomes. The pilot exists to produce that evidence.

02 / THE WEDGE

A fair hearing for a rough idea.

Self-service AI makes drafts abundant. It does not automatically choose the right decision, assess evidence, integrate specialist judgment, manage risk, or finish the work. Lame Brain Ideas is designed for that gap.

WHO	URGENT JOB	BEST START
First-time or non-technical builder	Turn a rough possibility into a responsible test.	Quick Diagnostic / Idea Sprint
Existing small-business owner	Decide whether and how to launch a new offer, channel, or location.	Idea Sprint / Venture Build
Community or economic-development host	Give participants a structured program and measurable outcomes.	Partner Workshop
Creator or maker	Package and test a project without pretending to provide regulated advice.	Idea Sprint / Venture Build

Positioning

For people and organizations with a rough idea, Lame Brain Ideas is a human-guided decision studio that turns uncertainty into evidence, artifacts, and responsible next steps. Unlike a blank AI chat, generic coaching, or a full agency, it combines facilitation, research standards, practical production, and explicit stop/go judgment.

The first obtainable market is constrained by trusted distribution and reviewed delivery hours—not by national market share. The launch should favor one region and specific decisions over broad claims that it can help anyone with anything.

03 / FOUNDING OFFERS

Buy an outcome, not a fog.

OFFER	PRICE	PLANNED HOURS	WHAT THE CUSTOMER LEAVES WITH
Quick Diagnostic	$125	1.25	A framed problem, risk map, and next responsible step.
Idea Sprint	$750	4	Customer, offer, evidence plan, and first-pass economics.
Venture Build	$4,200	22	Research, operating plan, financial model, and launch brief.
Partner Workshop	$2,500	10	A facilitated cohort, participant tools, and an outcomes report.

$1,719 **weighted service revenue** At the modeled offer mix.	**8.71 h** **weighted delivery time** Must be replaced by time logs.	**58.8%** **Month 24 contribution margin** Depends on unproven mix and costs.

Offer rules

Every engagement names one decision, intended user, artifact, exclusions, price, revision allowance, data boundary, and stop condition. Specialist work is quoted separately or referred. Discounts are attributed to acquisition or sponsorship rather than hidden inside realized price.

Membership begins no earlier than Month 13 and only after paid continuation demand. Media sponsorship begins no earlier than Month 18 and only after audience quality and editorial independence are documented.

04 / THE METHOD

Make the uncertainty visible.

STEP	WORK	CONTROL
01 / Frame	Define the decision, affected people, deadline, constraints, and success.	One-page decision frame
02 / Research	Gather current sources and separate facts, estimates, assumptions, and unknowns.	Claim-level evidence register
03 / Build	Create the smallest artifact that can move the decision forward.	Scope, ownership, accessibility
04 / Test	Put the idea in front of real people and measure behavior.	Consent, attribution, actuals
05 / Decide	Proceed, revise, pause, refer, or stop—with a reason.	Named human owner

What quality means

A useful deliverable answers four questions: What decision is this for? What is fact, estimate, assumption, target, or unknown? What evidence would change the recommendation? Who is accountable for the final judgment?

Service boundary

The studio does not provide legal, tax, medical, investment, engineering certification, or patentability opinions. It does not guarantee funding, IP protection, commercial success, media reach, or investor interest. Work stops or refers when those judgments are central.

05 / FIRST 90 DAYS

Prove the operating thesis.

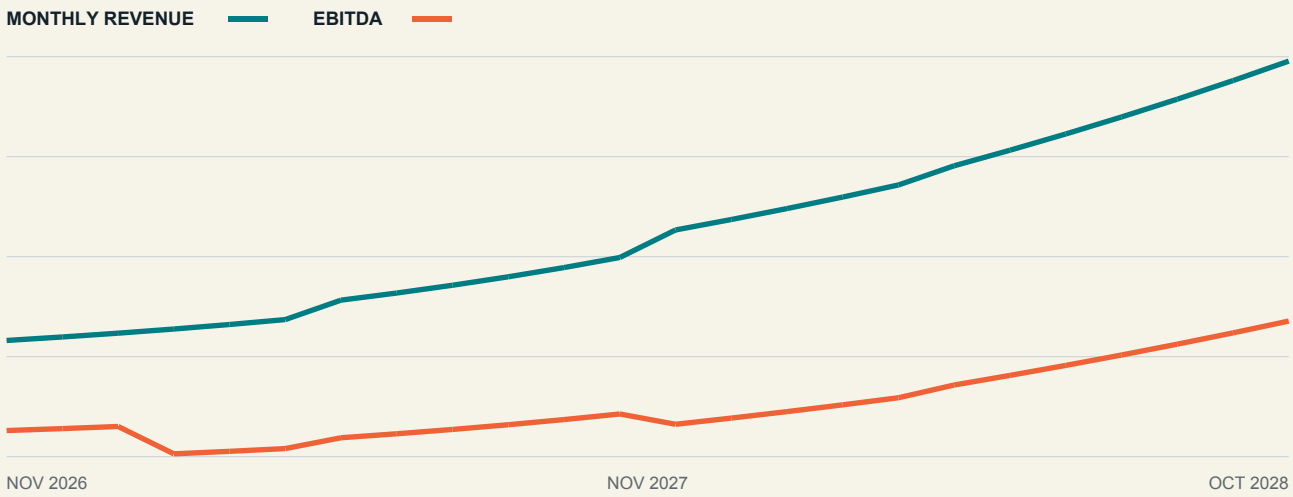

WINDOW	BUILD	RELEASE GATE
Days 0–30	Entity, agreements, insurance, payments, approved tools, brand/name decision, three hosts, two internal case simulations, first two media pieces.	Controls approved; credible recruitment path; no material brand or insurance blocker.
Days 31–60	Sell and deliver paid cases; log channel, price, hours, cost, rework, refund, outcome, and follow-through; publish two more episodes.	Six paid cases; complete delivery economics; acceptable outcomes; no material trust incident.
Days 61–90	Reach or explain the 12-case target; finish eight episodes; replace model inputs with actuals; select one segment and two offers.	Written repeat, narrow, redesign, pause, or stop decision.

3 **host partners by Day 30** Trusted local distribution.	**12** **paid cases by Month 3** First commercial proof gate.	**8** **published episodes** Cadence and qualified actions.	**85%** **utilization ceiling** Protects review and quality.

The model currently produces about 11 paid cases in Months 1–3, slightly below the 12-case target. That gap is useful: the gate should challenge the management case, not automatically approve it.

Fund the learning. Protect the option.

$75K	$556.6K	$49.3K	$9.0K
prelaunch uses Professional setup + portable capacity.	**24-month revenue** Management case; not audited.	**Month 24 revenue** With 83.5% delivery utilization.	**Month 24 EBITDA** First turns positive in Month 19.

Model interpretation

The company absorbs losses while qualified lead volume, booking, paid conversion, offer mix, membership, and sponsorship mature. It requires approximately $226,014 of external funding to maintain a $25,000 minimum cash buffer. The model contains no storefront lease, crowdfunding fees, investor memberships, transaction compensation, or equity revenue.

Capital is authorized in tranches: $35,000 for trust and setup, $65,000 for the paid pilot, and a $25,000 completion buffer. Each tranche has evidence requirements and stop conditions.

07 / DISTRIBUTION + MEDIA

Build trust in public.

CHANNEL	FOUNDING TEST	SUCCESS SIGNAL
Trusted hosts	Libraries, maker spaces, universities, SBDCs, chambers, coworking spaces, professional firms.	Attributed paid cases and repeat host demand.
Referrals	Ask after a documented outcome; build a vetted specialist bench.	Qualified introduction, follow-on work, or appropriate referral.
Public learning	Eight audio/video episodes: Idea Clinics, Builder Stories, Evidence Reviews, Field Notes.	Submitted decisions, hosts, expert corrections, bookings, and paid cases.
Targeted outreach	Small lists and partner-specific invitations; no national paid-media scale.	Message/channel combination that converts at a measurable cost.

Editorial compact

Media proves the method; it does not appropriate customer work. Paid service and media participation are separate choices. Every episode includes a transcript, captions, show notes, source links, disclosure, consent record, and one qualified next action. Sponsors receive no control over conclusions or corrections.

Evidence supports testing dual-format media: Edison Research reports 58% monthly U.S. podcast consumption among people age 12+ and 57% having consumed podcasts in both audio and video formats. Those national figures justify a channel experiment, not an audience forecast.

08 / TRUST + GOVERNANCE

Human responsibility. Visible boundaries.

COMMITMENT	OPERATING CONTROL
Data restraint	Public intake asks only for contact, starting point, and a one-sentence goal. Confidential handling terms come before sensitive work.
Responsible AI	Approved tools, engagement-specific data rules, traceable evidence, recorded human review, and no automated high-risk decisions.
Research integrity	Facts, calculations, management assumptions, pilot targets, policies, and unknowns remain distinct.
Separate consent	Paid service never requires public exposure. Media use has specific scope and revocation terms.
Accessibility	Keyboard, focus, contrast, reflow, reduced motion, transcripts/captions, and alternative-format review.
Corrections	Material errors are dated and propagated to related public artifacts and active media notes.

Named human decision rights

The Founder / General Manager owns strategy and capital. Delivery owns scope and outcomes. Research & Integrity owns claims and corrections. Trust & Operations owns tools, data, retention, and incidents. Editorial owns consented public work. Finance owns actuals and cash. AI and automated agents may assist; they never own a decision.

Current U.S. guidance also matters: the Copyright Office centers sufficient human expressive contribution in AI-assisted work, and the USPTO states that only natural persons may be named as inventors. Specialist counsel must apply those principles to an actual project.

09 / EVIDENCE STATUS

Large context. Unproven purchase.

CLAIM	STATUS	DECISION USE
36.2M U.S. small businesses; 62.3M employees; 43.5% of GDP	Sourced	Economic context, not a customer count.
531,728 Aug. 2026 business applications; 28,501 projected formations	Sourced	Continuing formation activity, not willingness to pay.
$125–$4,200 founding offer prices	Unproven	Replace with transactions and loss reasons.
50%+ contribution is attainable	Modeled	Replace with invoices, time, cost, rework, and refunds.
The name is welcoming and protectable	Unknown	Moderated audience testing and trademark clearance.
Membership and sponsorship can extend the model	Gated	Test only after continuation and audience-quality evidence.

Primary research that changes the plan

Complete 30 decision interviews and 10 host interviews; run moderated name tests; close 12 paid cases across at least two offers; record time, cost, rework, refund, action, and 14-day follow-through; attribute every lead; finish three host experiments and eight media pieces. Proceed only if one segment and two offers show a credible path to repeatable acquisition, useful outcomes, and contribution below the 85% utilization ceiling.

Earn the right to expand.

PERIOD	COMPANY WORK	NOT YET
Months 1–3	Form, protect, recruit, sell, deliver, measure, publish, and make the first stop/go decision.	Lease, regulated revenue, mass acquisition.
Months 4–12	Keep one segment and two offers; standardize quality; grow to 6–10 regional hosts; publish monthly evidence notes.	Membership without demand; permanent site without a quantified constraint.
Months 13–24	Test one paid continuity cohort; expand repeat partner programs; test sponsors after audience-quality controls.	National platform or franchise without one repeatable local system.

Principal risks

RISK	EARLY WARNING	RESPONSE
Curiosity does not convert	High interest, low payment	Narrow the customer and outcome; stop broad awareness spend.
Scope becomes unbounded	Hours and rework exceed plan	Tighten intake, change control, exclusions, and referrals.
Brand repels intended users	Ableist or insulting interpretation	Rename before material spend.
Growth outruns review	Utilization >85%; missed QA	Waitlist, raise price, add reviewed capacity, or reduce scope.
Founder concentration	Decisions and relationships bottleneck	Document playbooks, delegate roles, and build succession coverage.

The plan changes when evidence does.

Next move

Close the human launch blockers: form the entity, clear the name, approve agreements and data handling, bind insurance, activate business banking/payments and public email, complete accessibility tests, sign three hosts, and fund the first controlled tranche. Then begin the 90-day pilot and let paid behavior—not enthusiasm—decide what the company becomes.
